KeyOn Provides Quality, High-speed Broadband Internet Access Service for only \$24.95 per Month

KeyOn's Unique Patent-Pending Technology is Available in Henderson and Summerlin

Las Vegas, Nevada—KeyOn Communications L.L.C., today announced that their wireless high-speed Internet access service is now available for the first time in Henderson, NV. Residential and commercial customers finally have an alternative high-quality and affordable method to receive broadband. KeyOn has deployed its technology to many commercial and residential customers in the Summerlin area over the past quarter and based on the incredible response, launched sooner than expected in Henderson. KeyOn's high-speed Internet access solution utilizes KeyOn's patent-pending technology, BrightEDGESM, 802.11 wireless equipment and a cellular-like architecture creating cost advantages as well as security and service level enhancements for its customers.

“KeyOn's broadband solution provides a secure and dependable high-speed Internet connection to both the residential and business markets for a fraction of the cost,” stated Jonathan Snyder, founder and CEO of KeyOn. “We are pleased to be able to provide our customers with an affordable alternative for broadband.”

KeyOn's wireless operating system is ready for deployment in the Henderson Green Valley area and will be available next week in the Henderson Silverado Ranch area. Please visit www.keyon.com for a complete local coverage map or call 949-3580 to verify your coverage area. For new residential customers, KeyOn is offering an introductory special offer that includes one-half off installation and one month of free service. Special rates for new business customers are also available. Call now to schedule installation and begin to enjoy the high-speed and substantial cost saving benefits of wireless connectivity.

-more-

KeyOn's technology was recently licensed by FairPoint Communications one of the leading providers of telecommunications services to rural communities across the country for deployment in 20 rural communities. KeyOn's solution allows the use of standards-based 802.11b equipment in an outdoor, wide-area network while providing enhanced security, remote and continuous network management and enlarged coverage areas. In sharp contrast to the public access, "hot spot" market, KeyOn's technology creates a carrier class, secure last mile solution to multiple customer segments.

About KeyOn Communications

KeyOn Communications L.L.C. owns proprietary, patent-pending technology used in the deployment and management of high-speed wireless data networks. KeyOn's technology is used to provide affordable high-speed Internet access to businesses and residences. KeyOn owns and operates a citywide network in Las Vegas, NV and licenses its solution to telecommunications service providers. For additional information, please visit KeyOn's web site at www.keyon.com.
